What's the Problem? Why act Quickly?

Fossil-fuel + biofuel air pollution cause 4-7 mil. premature air pollution deaths/yr worldwide costing >3% of world GDP

Global warming due to world emissions will cost ~\$16-20 trillion/year by 2050.

Increasing fossil energy use increases energy prices → economic, social, political instability

Drastic problems require immediate solutions.

Primary Contributors to Net Observed Global Warming

Wind, Water, Solar (WWS) All-Sector Solutions to Energy and Job Security, Air Pollution, Global Warming

ELECTRICITY	TRANSPORTATION	HEATING/COOLING	INDUSTRY
Wind	Battery-electric	Electric heat pumps	Electric resistance
Solar PV/CSP	Hydrogen fuel cell	Electric resistance	Electric arc furnaces
Geothermal	Cryogenic H ₂	Solar water preheat	Induction furnaces
Hydro			Dielectric heating
Tidal/Wave			Hydrogen

Types of Storage for 100% WWS System

ELECTRICITY

CSP with storage
Pumped hydro
Existing hydroelectric

HEATING/COOLING

Water
Ice
Rocks in soil

OTHER

Hydrogen
Demand-response

Seasonal Heat Storage in Rocks, Okotoks, Canada

Why Not Natural Gas?

Gas wells in Upper Green
River Valley, WY:
Ecoflight.org

50-70 times more CO₂ and air pollution per kWh than wind

Methane from natural gas a main contributor to Arctic ice loss.

Natural gas mining, transport, and use causes 5000 premature mortalities/year in the U.S.

Hydrofracking causes land and water supply degradation and enhanced methane leaks.

End-Use Power Demand For All Energy Purposes

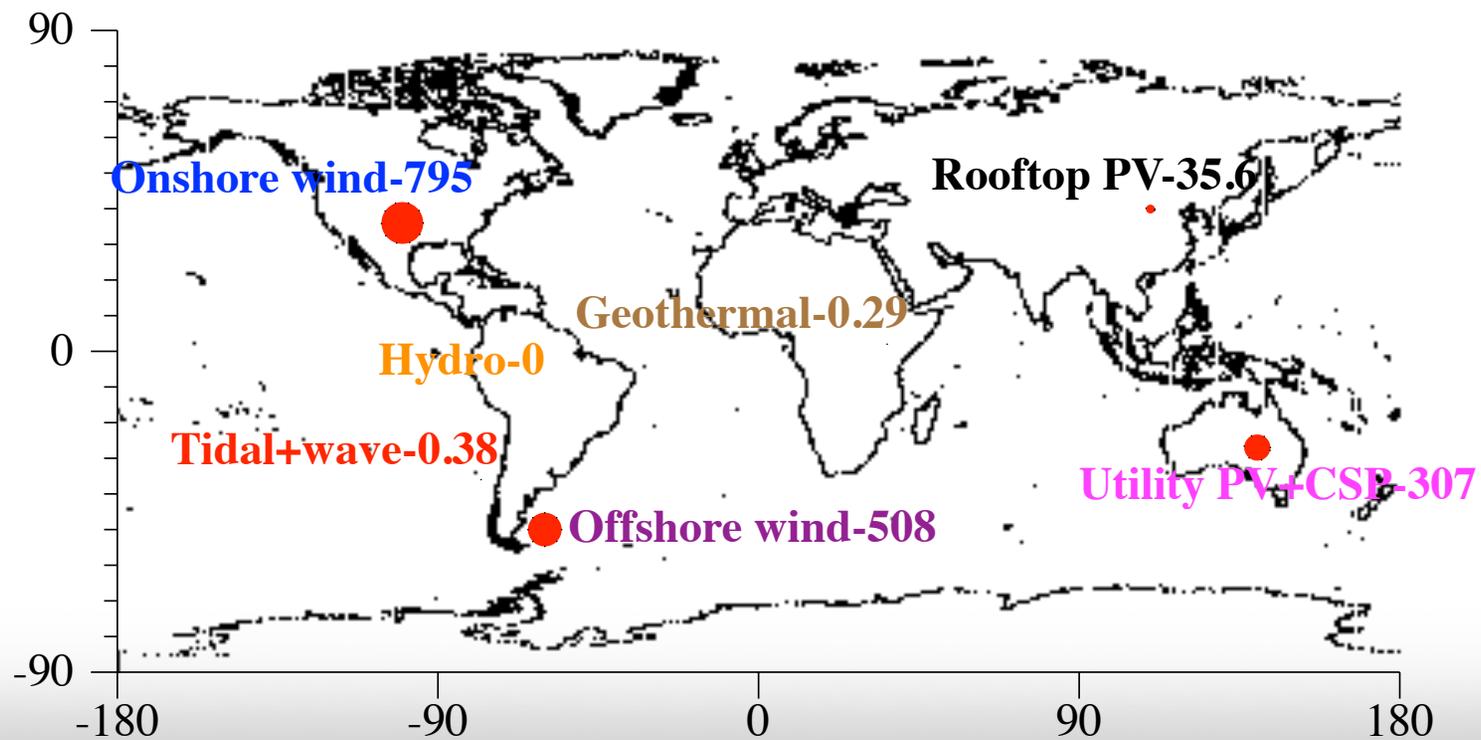

Year and Fuel Type	139-Countries	Missouri
2012 (TW)	12.0	0.043
2050 with current fuels (TW)	19.4	0.043
2050 WWS (TW)	11.8	0.026
2050 Reduction w/ WWS (%)	39	40.4

Number of New Plants to Power 139 Countries All Purposes

TECHNOLOGY	PCT SUPPLY 2050	NUMBER
5-MW onshore wind turbines	19.8%	1,192,000
5-MW offshore wind turbines	12.9	762,000
5-kW Res. roof PV systems	5.55	653 million
100-kW com/gov roof PV systems	5.97	35.3 million
50-MW Solar PV plants	42.3	497,000
100-MW CSP plants	7.67	15,500
100-MW geothermal plants	0.74	840
1300-MW hydro plants	4.38	0
1-MW tidal turbines	0.07	32,000
0.75-MW wave devices	0.72	496,000
	100%	

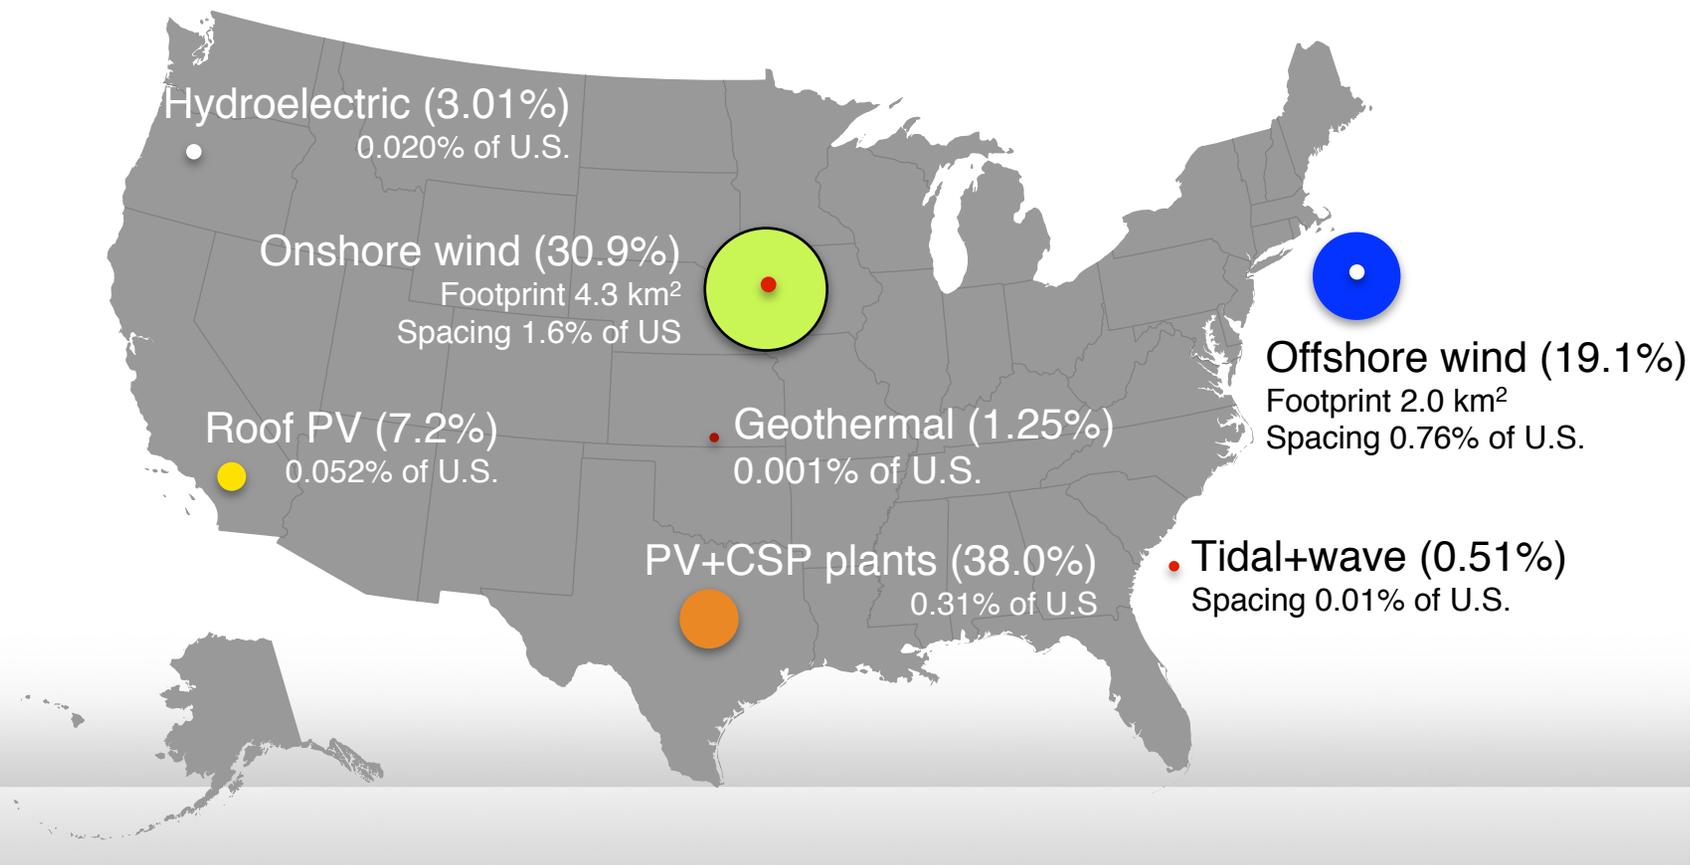

Area (Thousands of km²) Beyond 2014 Installations to Power 100% of 139 Countries for all Purposes w/ WWS in 2050

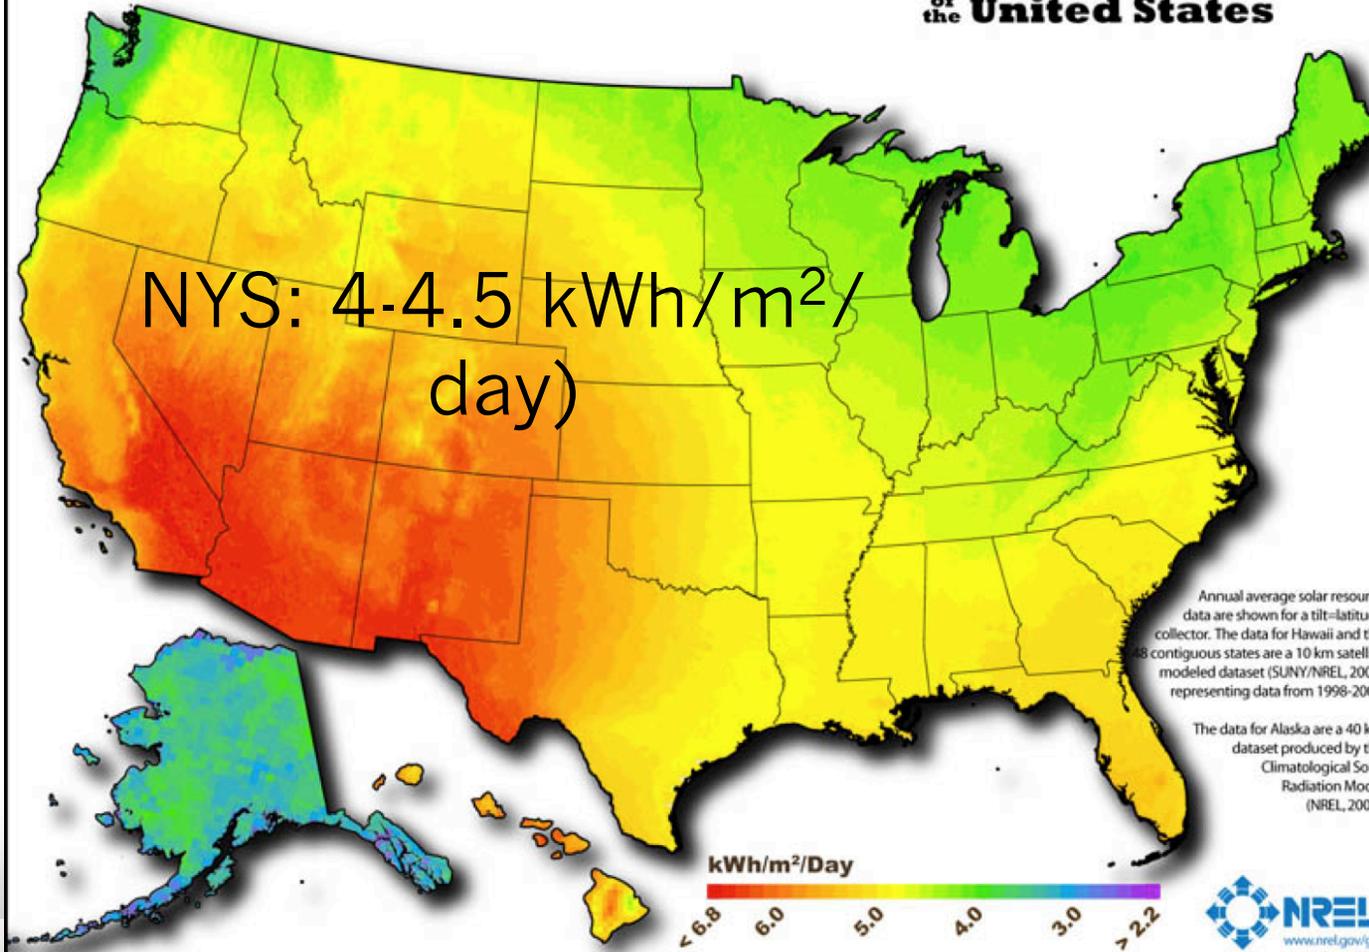

Number of New Plants to Power Missouri for All Purposes

TECHNOLOGY	PCT SUPPLY 2050	NUMBER
5-MW onshore wind turbines	60%	8,000
5-MW offshore wind turbines	0	0
5-kW Res. roof PV systems	5.1	1.65 million
100-kW com/gov roof PV systems	4.4	64,000
50-MW Solar PV plants	24.3	600
100-MW CSP plants	5.0	30
100-MW geothermal plants	0	0
1300-MW hydro plants	1.2	0
1-MW tidal turbines	0	0
0.75-MW wave devices	0	0
	100%	

Additional Area Needed to Power 100% of 50 States for all Purposes With Wind, Water, & Solar in 2050

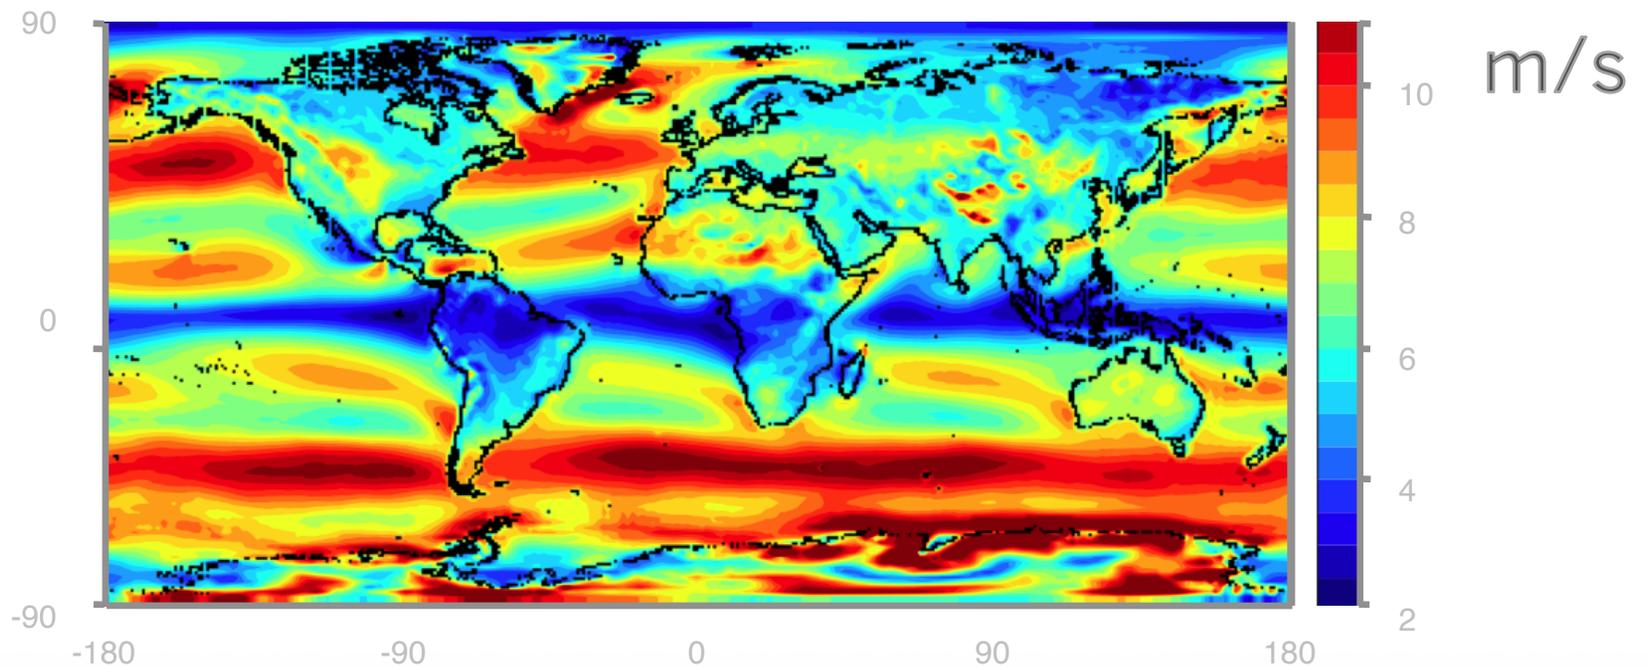

Photovoltaic Solar Resource of the United States

Author: Billy Roberts - October 20, 2008

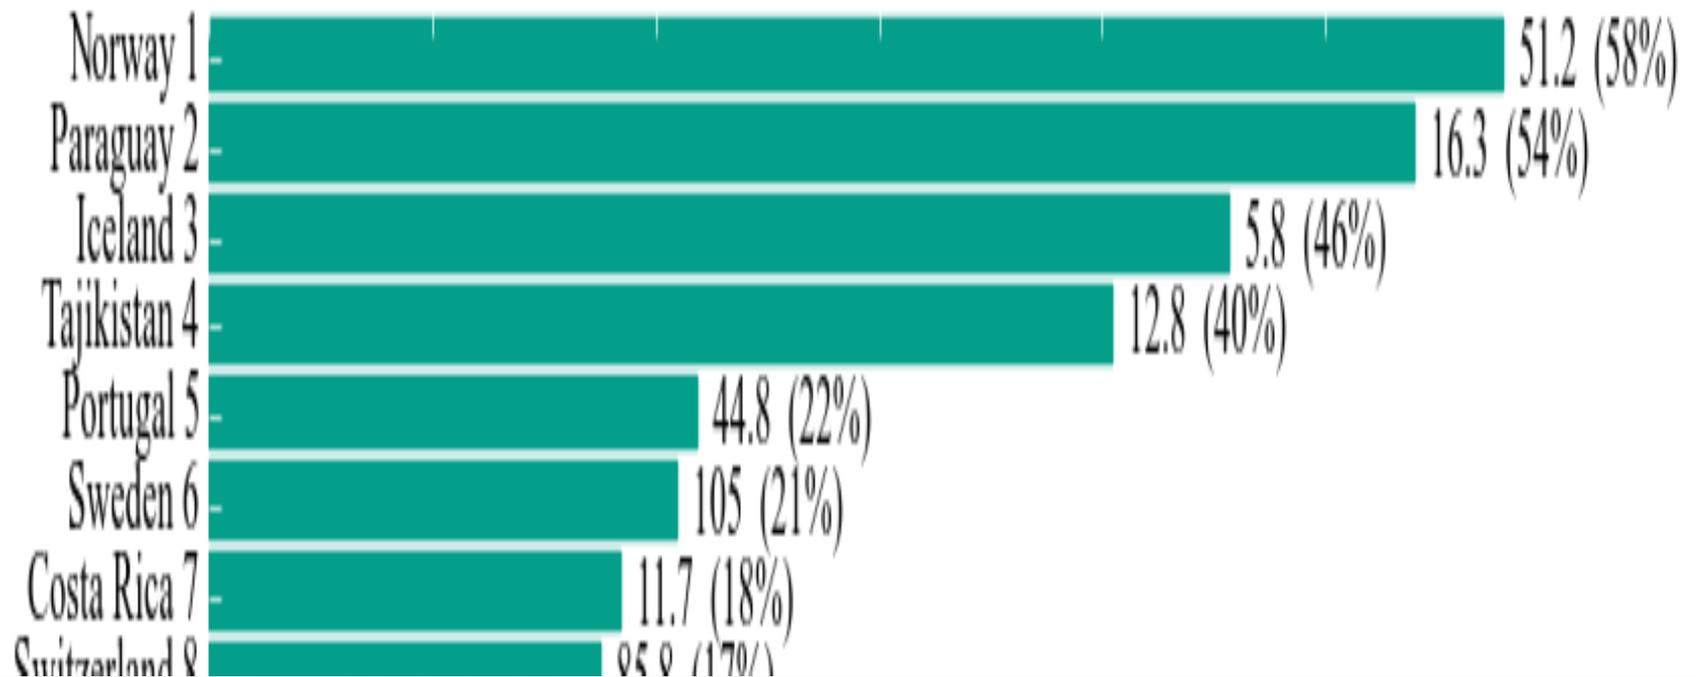

This map was produced by the National Renewable Energy Laboratory for the U.S. Department of Energy.

World Wind Speeds at 100m

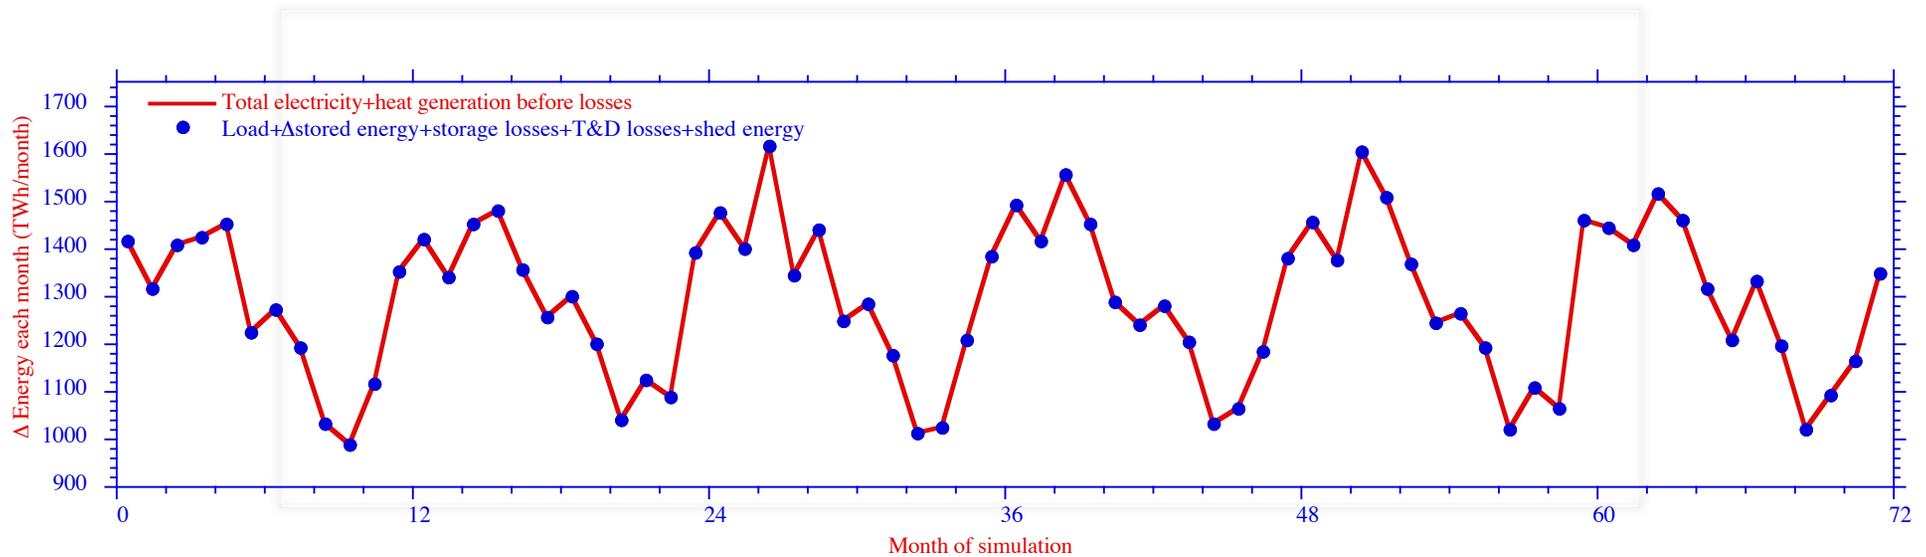

All wind over land in high-wind areas outside Antarctica $\sim 70-80$ TW
= $\sim 5-6$ times world end-use WWS power demand 2050 of 13.4 TW

% of 2050 All-Sector WWS Already Installed

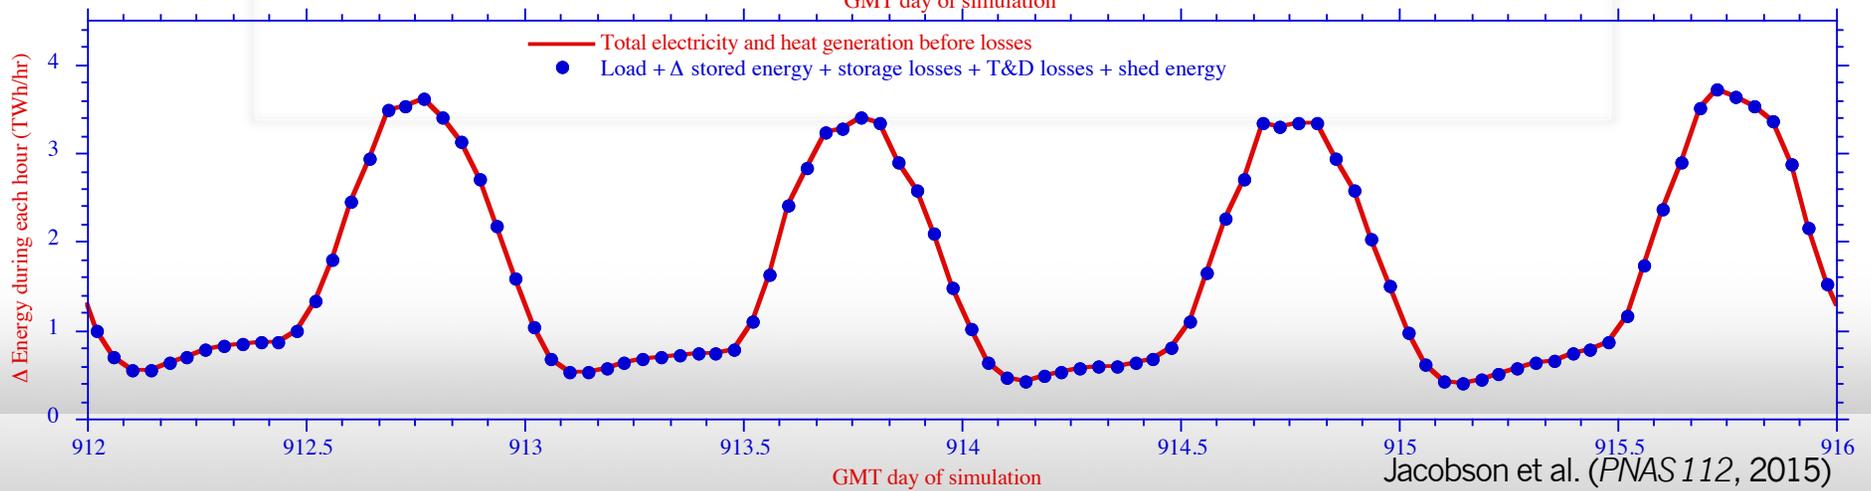

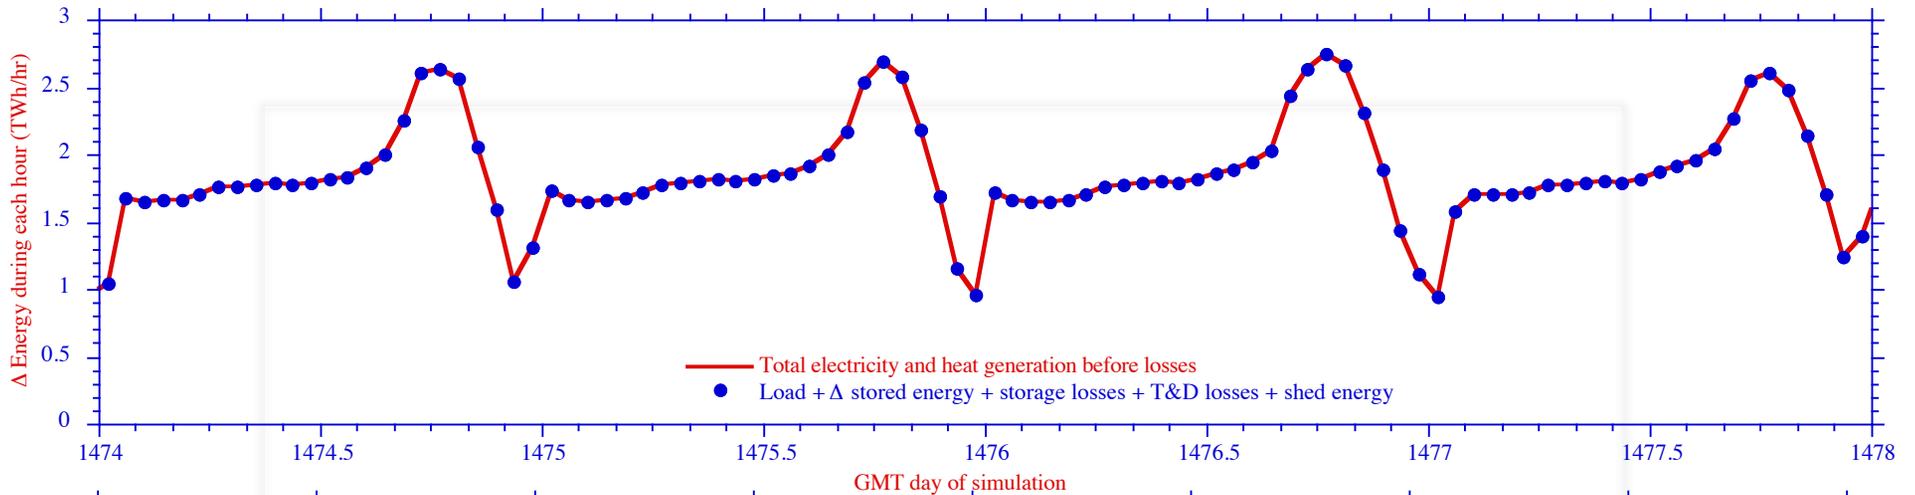

Matching 100% 2050-2055 U.S. Load With WWS for 6 Years

Red = Energy supply

Blue = Energy demand + change of storage + losses

Matching 100% U.S. Load With WWS on Two Sets of Four Days

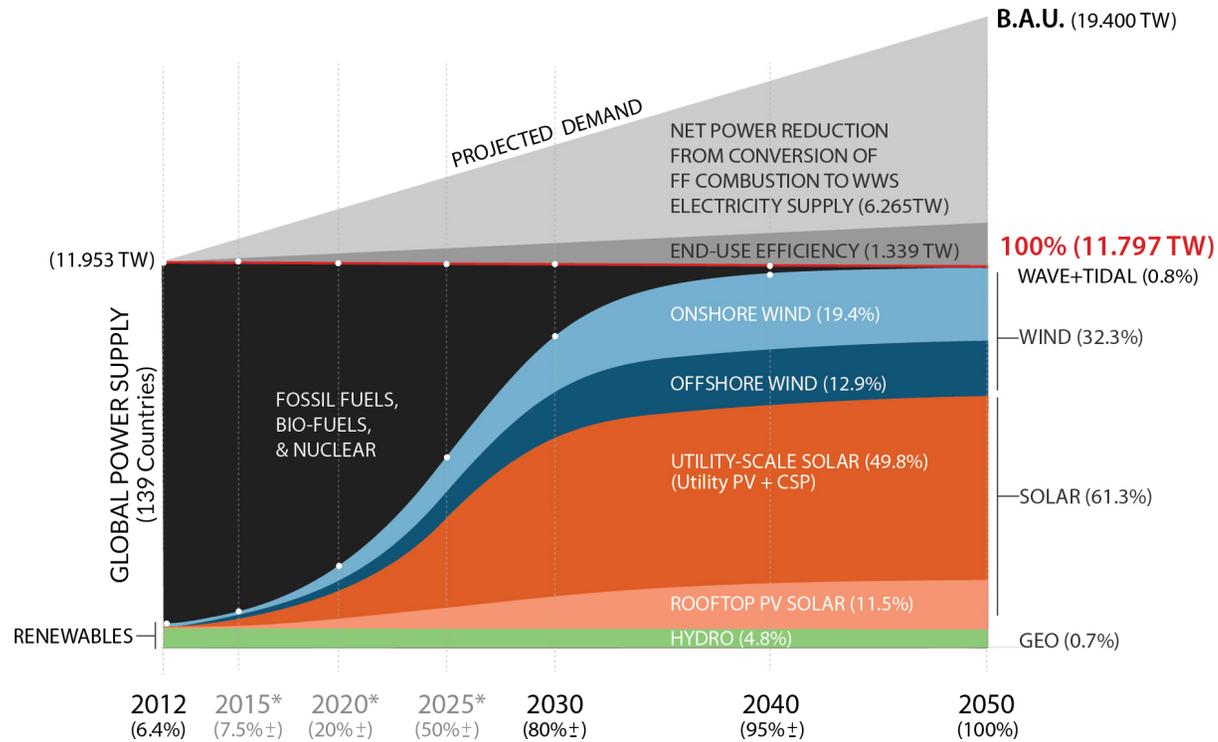

Jacobson et al. (*PNAS* 112, 2015)

2015 U.S. Unsubsidized Costs of Energy (¢/kWh)

Wind onshore	3.2	to 7.7
Wind offshore	11	to 19.4
Geothermal	8.2	to 11.7
Hydroelectric	4	to 6
CSP with 14 hr storage*	9	to 13.5
Utility-scale solar PV	5.0	to 7.0
Community rooftop PV	7.8	to 13.6
Residential rooftop PV	18.4	to 30.0
Gas combined cycle	5.2	to 7.8
Gas peaking	16.5	to 21.8
Advanced pulverized coal	6.5	to 15.0
Nuclear	9.7	to 13.6

Lazard (2015); *Solar Reserve (2016)

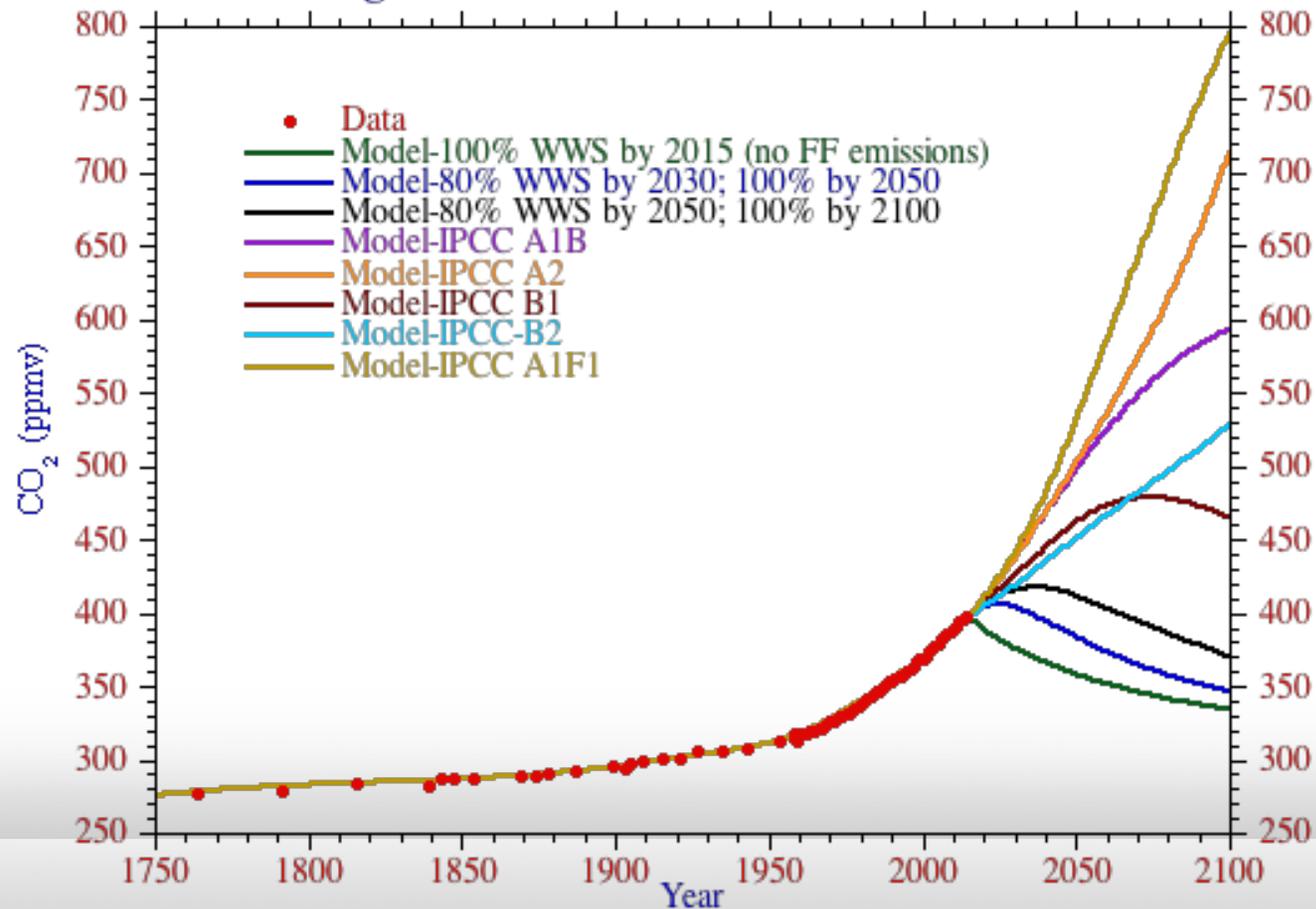

Timeline for 139-Country Transition to WWS

Projected Energy Supply & Demand, 139 Countries

© Solutions Project, 2015

**CO₂ From Siple Ice Core (1750-1953) / Mauna Loa (1959-2014)
vs. CO₂ From GATOR-GCMOM Model (1750-2100),
Including WWS and IPCC Scenarios After 2014**

House Resolution 540

Expressing the sense of the House of Representatives that the policies of the United States should support a transition to near zero greenhouse gas emissions, 100 percent clean renewable energy, infrastructure modernization, green jobs, full employment, a sustainable economy, fair wages, affordable energy, expanding the middle class, and ending poverty to promote national economic competitiveness and national security and for the purpose of avoiding adverse impacts of a changing climate.

Summary—Converting 139 Countries to 100% WWS

- Reduces 2050 139-country BAU power demand by ~39%
- Eliminates ~4-7 million premature air pollution deaths per year (saving ~\$25 trillion/yr ~7.9% of world GDP)
- Eliminates up to ~\$17 trillion/yr global climate costs 2050
- Each person saves \$170/yr fuel costs; \$4800/yr health+climate costs
- WWS w/storage+DRM gives 100% reliability @ ~11-12 ¢/kWh in US
- Creates 22 million more jobs than are lost
- Requires only 0.29% of land for footprint; 0.66% for spacing
- Makes countries energy independent, reducing international conflict
- Creates distributed power, reducing terrorism/catastrophic risk
- Reduces energy poverty of up to 4 billion people worldwide

Barriers : up-front costs, transmission needs, lobbying, politics.
